

Pre-Installation Check List

Your installation is coming up, and we want to provide you with a bit of preparation before we come. Please ensure this checklist is completed.

(Please note: Any job details previously discussed in your quote are still applicable, i.e. removal, plumbing)

- Disconnect and remove all existing countertops, backsplash, sinks and cooktops from cabinetries.
- Disconnect all plumbing. (Also need to reconnect plumbing after installation, try to have your plumber come 24 hours after installation) Unless you have hired Granstone to provide these services (should have been discussed previously).
- Ensure all lower cabinets and drawers are emptied.
- For areas that will be affected by the installation process please cover all area's entryways and vents to avoid dust and debris getting in those spaces
- Cover furniture and floors that are directly attached to the room where the installation will take place, to protect from any damage from substances used during the installation.
- Ensure there is a clear path for the installers to get to the room where the countertop is going to be installed
- Move all breakables from areas affected by installation work including where the installer will need to walk through to bring the countertop into set area
- Don't forget installing countertops is a construction process, so noise and dust can be expected during the process. Depending on the job it shouldn't take much longer than 3 hours to complete installation.

Please sign below, confirming that you have read and completed the checklist. Failure to satisfy all requirements may result in having to reschedule your installation, and an additional charge for a second visit.
