

## **Pre-Installation Checklist**

- Cover any installation area entryways and vents to contain dust and debris. It is also recommended to cover furniture along the path. This is to discretion of the client.
- Create a clear path for installers to get to the room where the countertops will be fitted. Remove all breakables from areas affected by installation work including room where installation is taking place. Ensure there is a clear path to access the house. (i.e., proper snow removal, de-icing)
- Ensure sink cabinet and top drawers are emptied. Other drawers and cabinets are recommended to be emptied to avoid dust or chemicals on belongings. Ensure existing countertops are removed completely from the work area. Unless previously arranged and invoiced for through Granstone.
- Disconnect all plumbing. It can only be reconnected 24 hours after installation. A plumber supplied by Granstone can be arranged upon placement of order. If plumbing is not disconnected at the time of your appointment, Granstone reserves the right to reschedule the installation.
- Disconnect and relocate all electrical/gas appliances i.e., refrigerator, cooktop, range etc. You may need to supply an electrician/ gas fitter for reconnection unless it has been arranged through Granstone. We are not responsible to move appliances or other belongings. If you request that we do so, this needs to be arranged ahead of time and will be invoiced for accordingly. We are not responsible for damages to said appliances, cabinets, floors, etc.
- It is the client's responsibility to ensure all brackets and braces for overhangs are properly secured and installed. A carpentry team can be hired through Granstone to do so, if arranged, scheduled, and invoiced for ahead of time. We reserve the right to refuse installation if cabinets are not square or properly secured as this could impact the proper installation of new countertops.
